Spend where it pays. Skip where it doesn't.

What is in it for Primark.

Every £1 of targeted campaign spend

£1 → £4.15

spent — comes back

About £3 kept for every £1 spent.

After the campaign is paid for, on deliberately cautious save rates of 20% and 12%. A pilot measures the real ones.

Attention goes where the value is

- **9 in 100** personal attention, quickly
- **21 in 100** rewarded, not discounted
- **50 in 100** one cheap automated message
- **20 in 100** a seasonal email, nothing more

£540k of next year's revenue is at risk. We chase only the part that pays back.

For every 1,000 customers you can identify, each year

£4.2k	£1.0k	£3.2k
won back	spent	kept, net

Tested on a year the model never saw: 10% more accurate than the RFM method. Synthetic data.

Customer Lifetime Value

One year of one customer, C10000. Twelve rings, one per month; every dot is a day. Black is a visit. Orange is the silence since her last one.

Find her. Reach her. Keep her.

Synthetic data

Two customers. Both quietly drifting away.

Same warning sign.

C10000

● Protect

38, Manchester. A loyal family shopper.

73%

chance she has drifted

£345

worth next year if she stays

Invest

Early access and a Womenswear offer

About £8 spent for about £50 back

Different decision.
